WEATHER BRIEF for Monday, April 03, 2017 from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00 hrs Monday April 03, 2017, were available for most of the stations.

The highest rainfall recorded was 6.5 mm at Kaieteur in Region 8.

Synopsis: A ridge of high pressure is the dominant feature over Guyana; however localized conditions generated weak convective clouds over inland and interior locations.

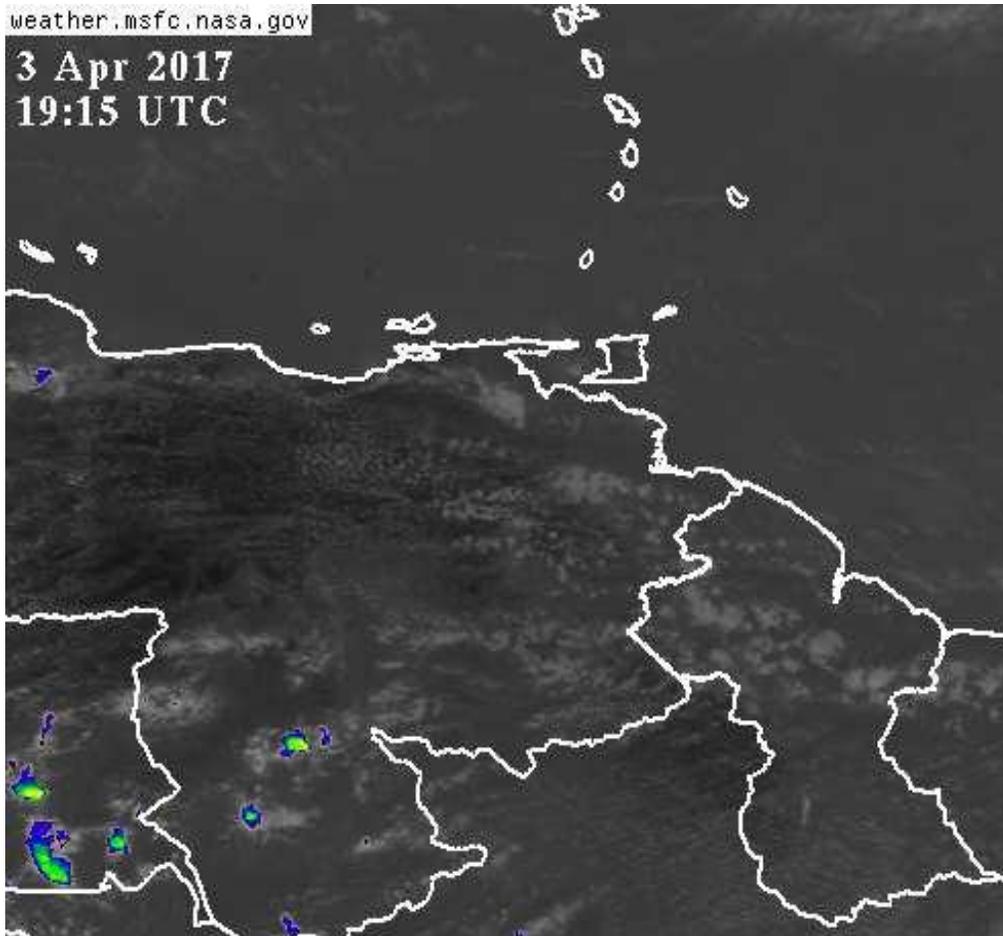

Today's weather review: Partly cloudy and sunny skies with scattered showers were observed throughout Guyana.

Table # 1 Weather forecast for the next Twenty-four hours.

Monday April 03, 2017 (19:00 hrs – 07:00 hrs)			Tuesday April 04, 2017 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions		Regions	Weather Conditions	
		Fair to partly cloudy skies with scattered showers can be expected throughout Guyana.			Partly cloudy and sunny skies with scattered showers can be expected throughout Guyana.
		<u>Winds:</u> Coast: North-easterly between 2 m/s and 4 m/s. Strong winds can be expected before and during heavy downpours. Hinterland: Light to calm. Strong winds can be expected before and during heavy downpours.			<u>Winds:</u> Coast: North-easterly to south-easterly between 4 m/s and 8 m/s. Strong winds can be expected before and during heavy downpours. Hinterland: North-easterly to easterly between 2 m/s and 4 m/s. Strong winds can be expected before and during heavy downpours.
Regions 1 to 10	Rainfall between: 0.0 mm to 10.0 mm (0.0 in and 0.39 in).	<u>Minimum temperatures:</u> Coast: 22 °C – 25°C Hinterland: 18 °C – 22 °C	Regions 1 to 10	Rainfall between: 0.0 mm and 10.0 mm (0.0 in and 0.39 in).	<u>Maximum temperatures:</u> Coast: 29 °C – 32°C Hinterland: 28 °C – 33 °C

The long-term daily average rainfall for Georgetown, for the next 10 days, April 03 to April 12, 2017 is 4.9 mm per day.

Warnings: Above normal high tides is not in effect. The next period will begin Friday April 14, 2017.

Table # 2 Occurrences of high and low tides for the next 24 hours and the times for sunrise and sunset.

Tonight (April 03,2017)	Tomorrow Morning (April 04, 2017)		Tomorrow Afternoon (April 04, 2017)
<i>High Tide 22:19hrs Height 2.46m</i>	<i>Low Tide 03:54hrs Height 1.13m</i> <i>High Tide 10:03hrs Height 2.48m</i>		<i>Low Tide 16:48hrs Height 1.01m</i>
<i>Sunrise</i>	<i>05:48hrs</i>	<i>Sunset</i>	<i>18:01hrs</i>

Sea conditions: SLIGHT TO MODERATE SEAS WITH WAVES REACHING HEIGHTS OF 1.5 TO 2.0 METERS IN OPEN WATERS

Extended Forecast

Wednesday:* Partly cloudy and sunny skies with scattered showers can be expected throughout Guyana. **Rainfall is expected to range between 0.0 mm and 10.0 mm (0.0 in to 0.39 in) within a 24hrs period.*

Thursday thru' Sunday:* Partly cloudy to cloudy skies with scattered light to moderate showers can be expected throughout Guyana; some inland and interior locations can expect possible isolated thundershowers during the afternoon, conditions are likely to improve over coastal areas during the afternoon. **Rainfall is expected to range between 0.0 mm and 25.0 mm (0.0 in and 0.98 in) within a 24hrs period.*

Seasonal Information (UPDATED 13 March, 2017) – ENSO alert status: Not Active

ENSO-neutral conditions are favored to continue through at least the Northern Hemisphere spring 2017 (June), with increasing chances for El Niño development into the fall (September).

According to the ENSO update issued on Thursday March 9, 2017, by the Climate Prediction Centre and associates, ENSO neutral conditions continued throughout the month of February, 2017. This was reflected in near-average sea surface temperatures (SSTs) across the central equatorial Pacific and above-average SSTs in the eastern Pacific. The low-level easterly winds were slightly enhanced over the western tropical Pacific and were weaker than average over the eastern Pacific. Also, upper-level westerly winds were anomalously easterly over portions of the western and eastern Pacific. Most models predict the continuation of ENSO-neutral through the early Northern Hemisphere summer (May-July; Fig. 6). However, some dynamical model forecasts anticipate an onset of weak El Niño as soon as the late Northern Hemisphere spring (March-May 2017). Because of typically lower skill in forecasts made at this time of the year, and the lingering La Niña-like tropical convection patterns, the forecaster consensus favors ENSO-neutral conditions during the spring (March-May) with an approximately 75% chance. Thereafter, there are increasing odds for weak El Niño toward the second half of 2017 (50-55% chance from approximately July-December).

The latest CARICOF forecasts suggest that Guyana would experience above normal (35 % probability) to normal (35 % probability) weather conditions during the period March to May.

Surface analysis shows that the ITCZ is oscillating south of the equator and the subtropical High pressure is the most dominant feature in the Northern Atlantic. These and other dynamic and thermodynamic features in the atmosphere show that Northern Guyana is currently in its first dry season for the year, while Southern Guyana continues in its only dry season. Southern Guyana is expected to begin to transition into its only rainy season towards the end of March. Considering the present conditions and forecast conditions, Guyana is likely to experience above normal to normal weather conditions during the next three months. Please note that the dry season does not imply the absence of precipitation, but a reduction of precipitation.

Update in the bulletin is provided daily by the Hydromet Service: www.hydromet.gov.gy

Senior Meteorological Technician: L. Regis

Our Mission: To Observe, archive and understand Guyana's weather, and Climate and provide meteorological, hydrological and oceanographic service in support of Guyana's national needs and international obligation.
