Weather Brief for Sunday, 08 November 2026 from the Hydrometeorological Service, Guyana.

Wauna in Region 1 recorded the highest rainfall of 12.1 mm in the past 24 hrs.

Synopsis: A ridge of high pressure continues to dominate weather conditions across Guyana, maintaining generally stable atmospheric conditions. However, forecast models indicate the gradual regeneration of the Intertropical Convergence Zone (ITCZ) over the course of the week, which is expected to increase atmospheric moisture and instability, resulting in a gradual increase in rainfall activity across the country.

Today's weather review: Fair and sunny skies were observed across Guyana.

Table # 1 Weather forecast for the next Twenty-four hours

Sunday, 08 November 2026(19:00 hrs – 07:00hrs.)			Monday, 09 November 2026 (07:00 hrs – 19:00 hrs.)
