

Hydrometeorological Service

Ministry of Agriculture, Guyana

Weather Brief for Monday, 13 April 2026 from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00hrs Monday, 13 April 2026 were available for most of the stations. **Kumaka in region 1 recorded the highest rainfall of 3.0 mm.**

Synopsis: Based on various numerical weather prediction models, subsidence and a broad ridge are dominating the forecast area, generating mostly stable conditions. However, weak perturbations and localized conditions produced some weak instabilities; similar conditions are expected for tomorrow. An increase in moisture and low-level troughs will produce an increase in instabilities on Wednesday into the remainder of the week.

Today's weather review: Partly cloudy and sunny skies with a few brief showers were observed across Guyana.

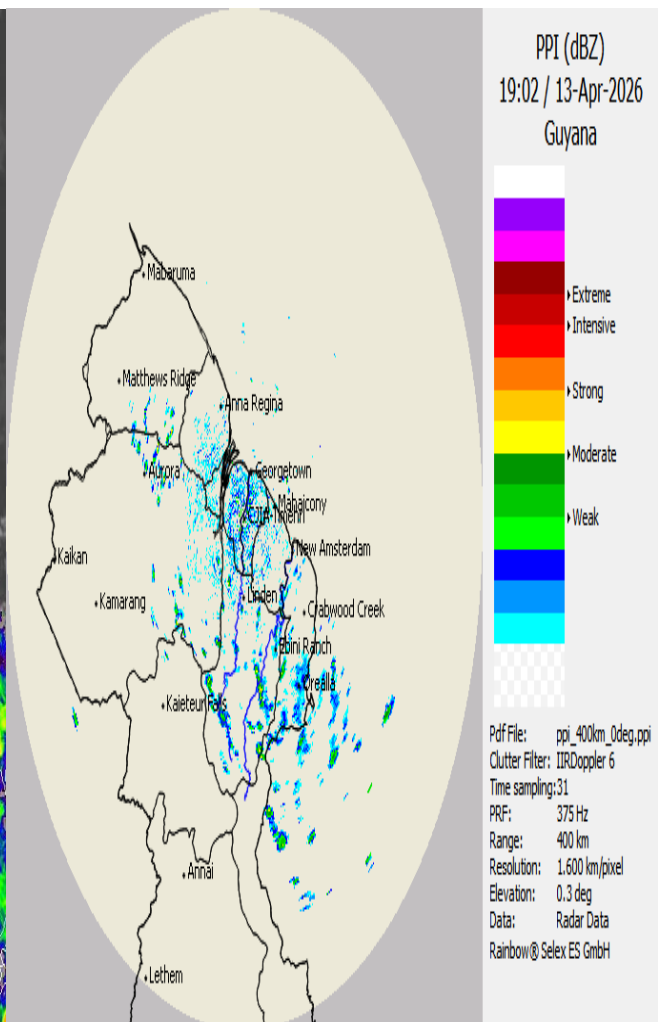

Table # 1 Weather forecast for the next twenty-four hours

Monday, 13 April 2026 (19:00 hrs – 07:00 hrs)			Tuesday, 14 April 2026 (07:00 hrs – 19:00 hrs)
