WEATHER BRIEF for today Saturday, 16 August 2025, from the Hydrometeorological Service, Guyana

*Rainfall records for the past 24 hours, measured at 08:00 hrs Saturday, August 16, 2025, were available for most stations.*

***De Edwards in Region 5 recorded the highest rainfall of 84.6 mm.***

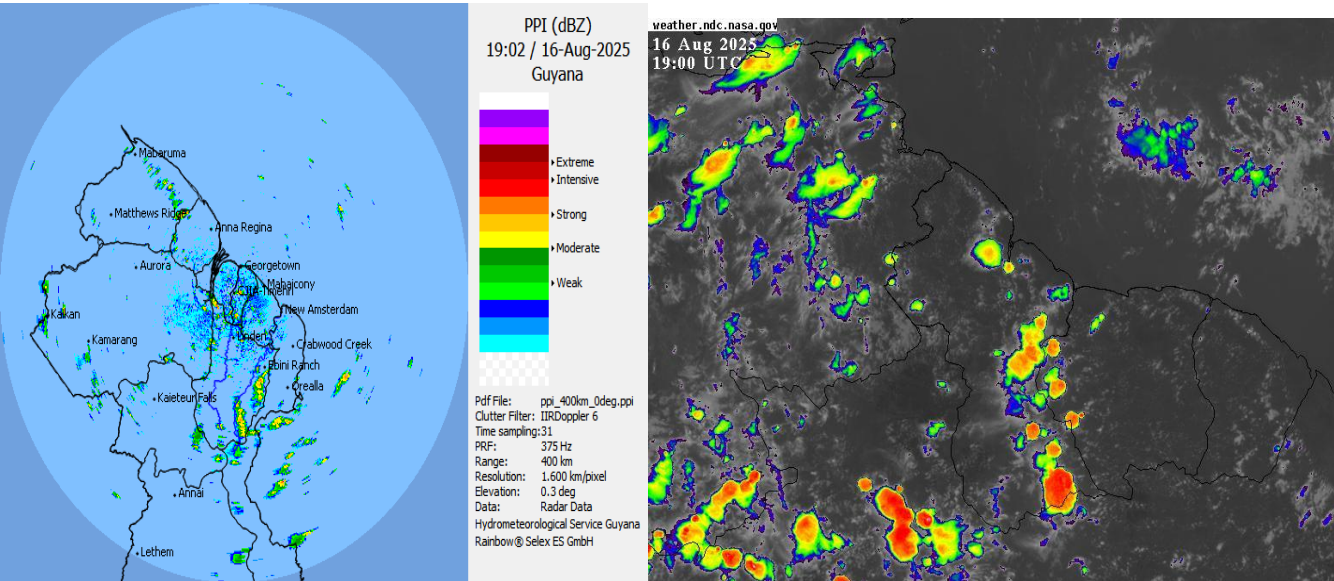

**Severe Weather Warnings: In areas of thundershowers, heavy winds and lightning strikes may be observed. Persons are asked to be alert and exercise caution in efforts to safeguard life and property.**

**Synopsis:** *Ridging is the dominant feature of interest affecting the forecast area. Stable conditions were observed over most of Guyana during the morning hours, with localized convection responsible for mild to moderate instabilities over Inland and Southern Guyana. Stable conditions are likely to continue for the next 12 to 72 hours over most of Guyana. The atmosphere is expected to become unstable from Thursday and continuing into Friday as the ITCZ and increased moisture surges will become the dominant features of interest.*

*Today's weather review: Cloudy skies with scattered showers and thundershowers were observed over Inland and Southern Guyana. Partly cloudy and sunny skies elsewhere.*
