MINISTRY OF AGRICULTURE

WEATHER BRIEF for today Friday, 13 February 2026, from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00 hrs Friday, February 13, 2026, were available for most stations.

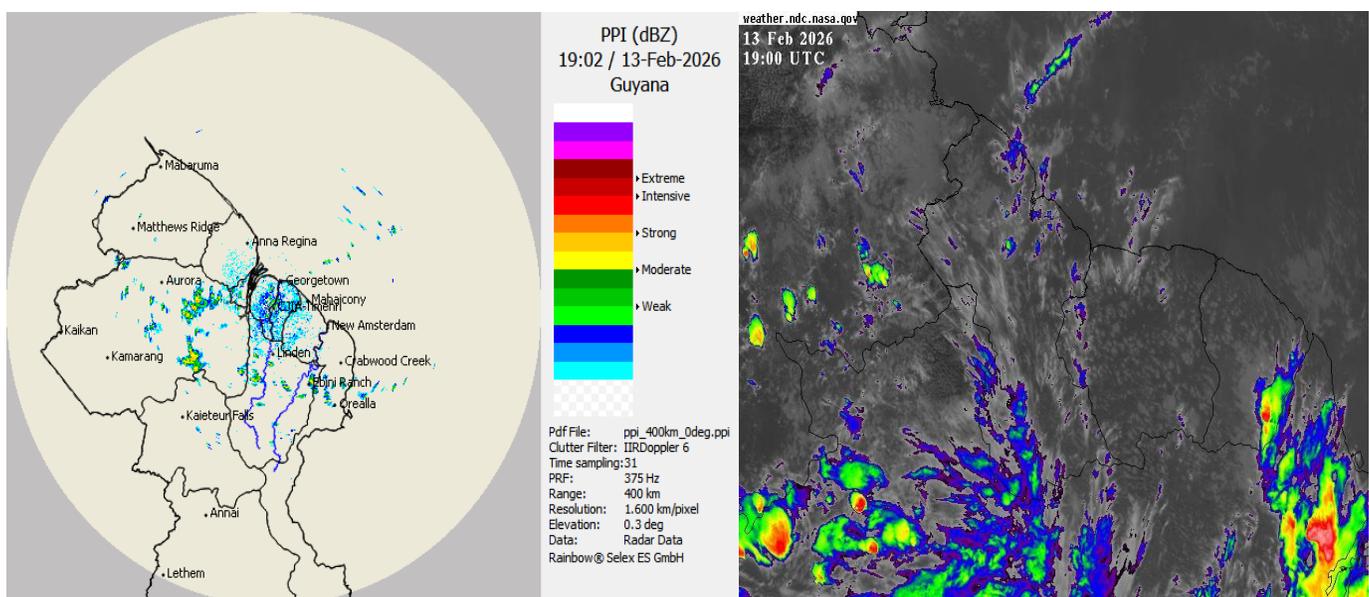

Boerasirie in Region 03 recorded the highest rainfall of 69.2 mm.

Synopsis: A ridge of high pressure is the most dominant synoptic feature affecting Guyana. This is expected to continue for the weekend and into the new week. However, at the 850 mb level, moisture plumes embedded within troughs are expected to propagate over Regions 4 to 10. This can likely lead to mild to moderate convection over these areas. Meteorological models are indicating that areas over Coastal Guyana will likely experience these conditions during the early morning, while Inland and Hinterland areas will observe from the afternoon. Mid to upper-level vertical shear will also inhibit the development of deep convective clouds.

Today's weather review: Cloudy skies with moderate showers were observed over Region 5 and the inland areas. All remaining areas observed partly cloudy and sunny skies.

Friday, 13 February 2026 (19:00 hrs – 07:00 hrs)			Saturday, 14 February 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions		Regions	Weather Conditions	
Coastal Guyana	 No significant rainfall.	Partly cloudy to fair skies are likely to continue over Coastal Guyana. Inland and Southern Guyana can expect partly cloudy skies with isolated showers. <u>Winds:</u> Moderate north-easterly to easterly breeze. <u>Minimum temperatures:</u> Coast: 22 °C – 24 °C Hinterland: 19 °C – 22 °C	Coastal Guyana	 No significant rainfall.	Partly cloudy to sunny skies can be expected over Coastal Guyana. Cloudy skies with isolated to scattered showers varying from light to moderate can be expected over Inland and Southern Guyana from the late afternoon. <u>Winds:</u> Moderate north-easterly to easterly breeze. <u>Maximum temperatures:</u> Coast: 30 °C – 32 °C Hinterland: 31 °C – 33 °C
Inland and Southern Guyana	 Rainfall between: 5.0 mm and 15.0 mm.		Inland and Southern Guyana	 Rainfall between: 5.0 mm and 20.0 mm.	

Georgetown's long-term daily average rainfall for the next 10 days, from February 13 to February 22, 2026, is 4.3 mm per day.
