MINISTRY OF AGRICULTURE

WEATHER BRIEF for today Wednesday, 17 June 2026, from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00 hrs Wednesday, June 17, 2026, were available for most stations.

Arpiaco Creek in Region 02 recorded the highest rainfall of 150.0 mm.

Severe Weather Warnings: In areas of thundershowers, heavy winds and lightning strikes may be observed. Persons are asked to be alert and exercise caution in efforts to safeguard life and property.

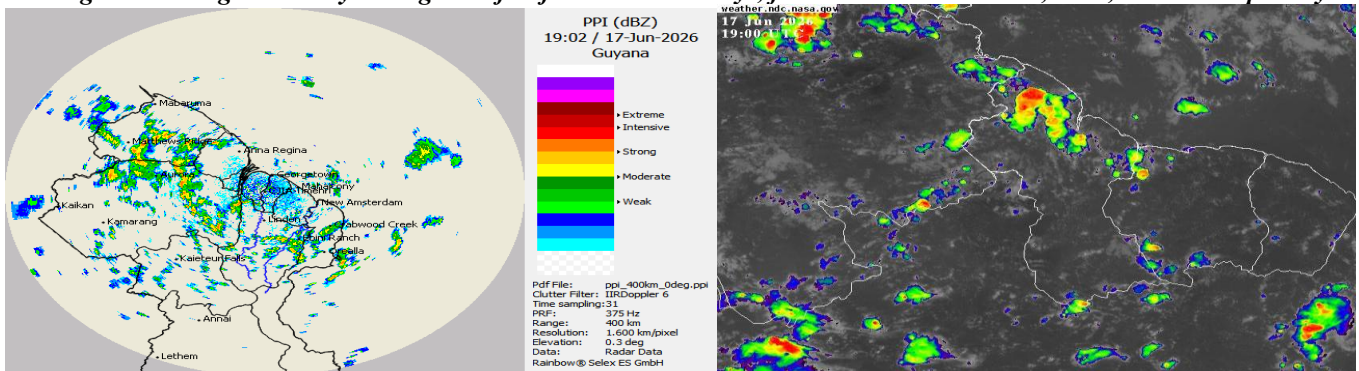

Marine Advisory: Citizens are advised that the spring tide advisory is in effect. Residents of low-lying, riverine, and flood-prone areas are advised to take the necessary precautions against flooding, as over-topping is likely.

Synopsis: Low level convergence coupled with mild to moderate amounts of moisture produced unstable conditions over Regions 1, 2, 6, 7 and 10 during the day. Elsewhere, so significant convection was observed. Based on latest output from various meteorological models, it is likely that Tropical wave #17 will affect areas over Regions 1 to 4 and 7 throughout the evening hours. Regions 6 to 10 will also experience periods of unstable conditions as low level forcings continue over those areas. During the morning hours, Regions 1, 2 and 7 will continue to experience mild to moderate convection while mild instabilities are expected elsewhere. For the remainder of the week, Coastal Regions 3 to 6 and Region 9 will likely experience generally stable conditions while localized conditions coupled with moisture convergence will produce mild to moderate instabilities over Regions 1, 2, and Inland areas. Tropical wave #18 is expected on Sunday, and continue into Monday and Tropical wave #19 is expected on Tuesday.

Today's weather review: Cloudy skies with scattered showers were observed over Regions 1, 2, 6, 7 and 10

Wednesday, 17 June 2026 (19:00 hrs – 07:00 hrs)			Thursday, 18 June 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions		Regions	Weather Conditions	
Regions 3 to 5	 Rainfall between: 0.0 mm and 10.0 mm	Cloudy skies with scattered showers of varying intensities, and intermittent rain and isolated thundershowers can be expected over Regions 1, 2 and 6 to 10 during the night. Regions 3 to 5 can expect cloudy skies with isolated to scattered showers during the evening hours with conditions expected to improve during the early morning hours. <u>Winds:</u> Gentle to moderate north-easterly to easterly breeze. Strong winds and lightning strikes during thundershowers.	Regions 3 to 5 and 9	 Rainfall between: 0.0 mm and 10.0 mm.	Partly cloudy to cloudy skies with isolated showers can be expected over Regions 3 to 5 and 9 during the early morning. Partly cloudy and sunny skies are likely to persist from the mid-morning. Regions 1, 2, 6 to 8 and 10 can expect cloudy skies with scattered showers and thundershowers from the afternoon. <u>Winds:</u> Gentle to moderate north-easterly to easterly breeze. Strong winds and lightning strikes during thundershowers.
5Regions 1, 2 and 6 to 10.	 Rainfall between: 10.0 mm and 40.0 mm.	<u>Minimum temperatures:</u> Coast: 22 °C – 24 °C Hinterland: 19 °C – 21 °C	Regions 1, 2, 6 to 8 and 10.	 Rainfall between: 5.0 mm and 25.0 mm.	<u>Maximum temperatures:</u> Coast: 29 °C – 31 °C Hinterland: 28 °C – 32 °C

Georgetown's long-term daily average rainfall for the next 10 days, from June 17 to June 26, 2026, is 10.2 mm per day.
