**WEATHER BRIEF for today Friday, 19 June 2026, from the Hydrometeorological Service, Guyana**

Rainfall records for the past 24 hours, measured at 08:00 hrs Friday, June 19, 2026, were available for most stations.

**Dawa South in Region 2 recorded the highest rainfall of 58.6 mm.**

**Severe Weather Warnings: In areas of thundershowers, heavy winds and lightning strikes may be observed. Persons are asked to be alert and exercise caution in efforts to safeguard life and property.**

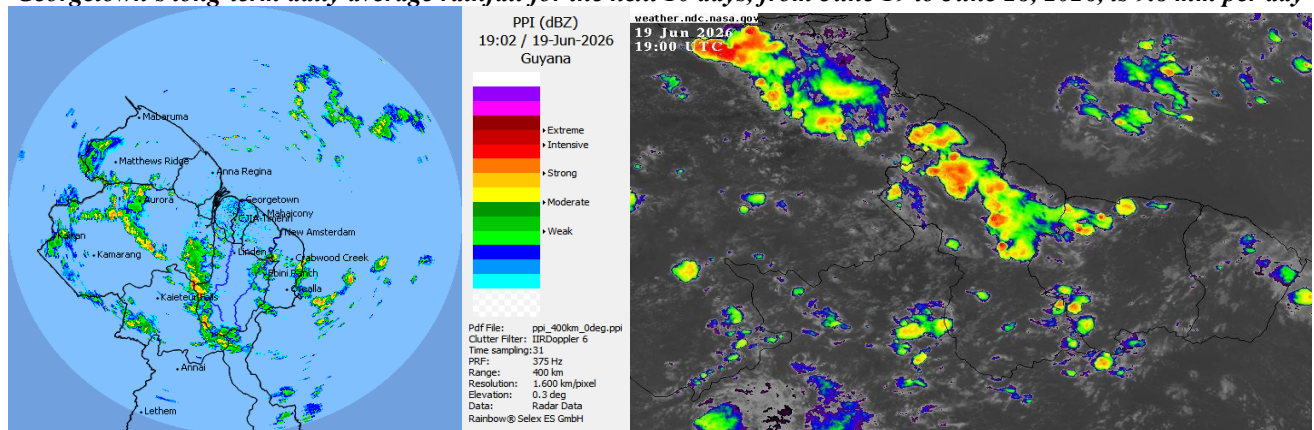

**Marine Advisory: Citizens are advised that the spring tide advisory is in effect. Residents of low-lying, riverine, and flood-prone areas are advised to take the necessary precautions against flooding, as over-topping is likely.**

**Synopsis:** Mostly unstable conditions were observed over Inland Guyana throughout the day. Surface convergence coupled with moisture plumes was mostly responsible for these conditions. These conditions are likely to move further Inland into the evening hours. Tropical wave #18 is another feature of interest that will likely affect areas over Regions 1 to 4 and 7 from tonight and continue into Tomorrow. The wave axis is currently near 52W from 02N to 18N. There is convection ahead and behind this wave axis, and therefore, the effects of this wave will likely continue until Sunday morning. Meteorological models are also indicating that surface convergence will impact Coastal Guyana during the morning hours, and convection will also move Inland as the morning progresses. Stable conditions are likely to persist from Sunday to Monday. Tropical wave # 19 is likely to affect Northern Guyana from late Monday night into Tuesday. Based on all the analyzed data from various NWP models, this wave is likely to produce moderate to severe convection, especially over Regions 1, 2, and 7.

**Today's weather review:** Cloudy skies with scattered showers were observed over Inland Guyana.

Friday, 19 June 2026 (19:00 hrs – 07:00 hrs)			Saturday, 20 June 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions		Regions	Weather Conditions	
Regions 3 to 5	 <b>Rainfall between: 5.0 mm and 25.0 mm</b>	Cloudy to overcast skies with scattered showers of varying intensities, intermittent rain, and isolated thundershowers can be expected over Regions 1, 2, and 6 to 10 during the night. Regions 3 to 5 will likely experience partly cloudy and fair skies during the evening hours, with cloudy skies accompanied by isolated to scattered showers during early morning hours.  <u>Winds:</u> Gentle to moderate north-easterly to easterly breeze. Strong winds and lightning strikes during thundershowers.	Regions 3 to 5	 <b>Rainfall between: 5.0 mm and 20.0 mm.</b>	Cloudy skies with isolated to scattered showers and intermittent rain can be expected over Regions 3 to 5 during the early morning. Partly cloudy and sunny skies are likely to persist from mid-morning. Regions 1, 2, 6 to 10 can expect cloudy skies with scattered showers and thundershowers.  <u>Winds:</u> Gentle to moderate north-easterly to easterly breeze. Strong winds and lightning strikes during thundershowers.
Regions 1, 2, and 6 to 10.	 <b>Rainfall between: 10.0 mm and 40.0 mm.</b>	<u>Minimum temperatures:</u> Coast: 22 °C – 24 °C Hinterland: 19 °C – 21 °C	Regions 1, 2, 6 to 10.	 <b>Rainfall between: 10.0 mm and 35.0 mm.</b>	<u>Maximum temperatures:</u> Coast: 29 °C – 31 °C Hinterland: 28 °C – 32 °C

**Georgetown's long-term daily average rainfall for the next 10 days, from June 19 to June 28, 2026, is 9.8 mm per day**
