**WEATHER BRIEF for today Tuesday, 23 June 2026, from the Hydrometeorological Service, Guyana**

Rainfall records for the past 24 hours, measured at 08:00 hrs Tuesday, June 23, 2026, were available for most stations.

**Helena No2 in region 4 recorded the highest rainfall of 97.3 mm**

**Severe Weather Warnings:** Soils may already be saturated from continuous rainfall, and given the forecast conditions, which indicate an increased chance of more rainfall, the likelihood of flooding significantly increases in low-lying areas and areas of poor drainage. Hilly areas can also expect possible mudslides during heavy downpours. In areas of thundershowers, heavy winds and lightning strikes may be observed. Persons are asked to be alert and exercise caution in efforts to safeguard life and property.

**Marine Advisory:** Rough sea conditions are expected to persist due to strong surface winds. Small vessel operators, fisherfolk, and other marine users should exercise caution and remain vigilant while at sea during this period.

**Synopsis:** Tropical wave # 19 is the major feature of interest affecting most of Northern Guyana. This wave is embedded within the ITCZ and produced moderate to severe convection over Regions 1 to 7 and 10. As this wave continues to west, it is still expected to affect Regions 1 and 7, throughout the evening hours. During the afternoon, a convergent pattern emerged over Regions 6, 8 and 10 and resulted in moderate instabilities. Meteorological models are indicating that mild to moderate instabilities are likely to continue into Tomorrow morning over Northern Guyana and Inland areas during the afternoon. Regions 1 to 5 can expect stable conditions from Wednesday afternoon and continue until Friday, as mild to moderate concentrations of the Saharan Dust is expected. The weekend is expected to become very unstable as new Tropical waves are expected.

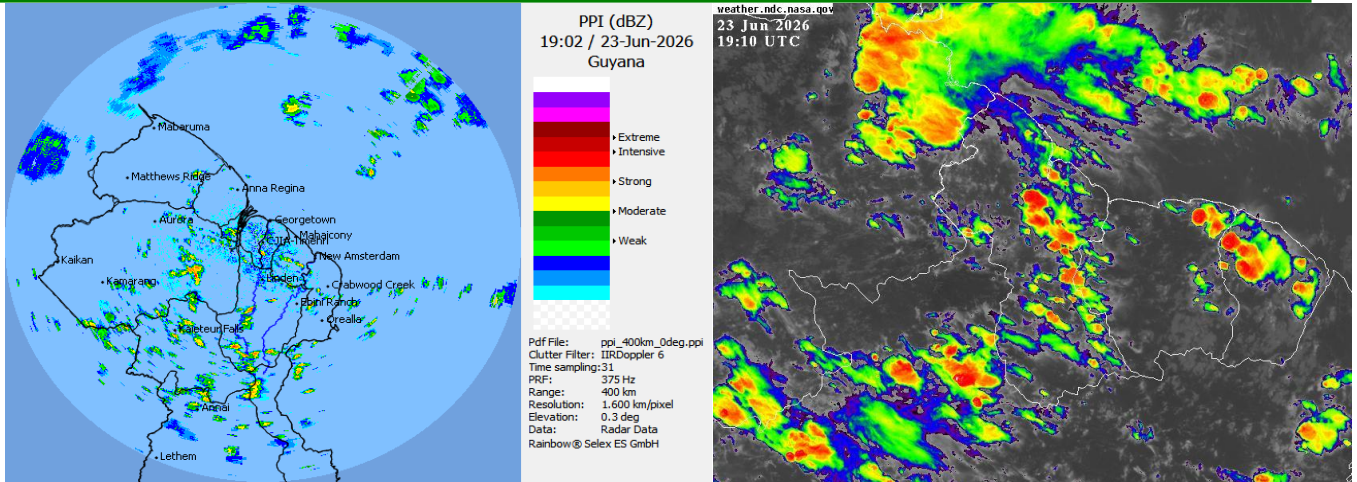

**Today's weather review:** Cloudy skies with scattered showers, rain and thundershowers were observed over Regions 1 to 7 and 10.

Tuesday, 23 June 2026 (19:00 hrs – 07:00 hrs)			Wednesday, 24 June 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions		Regions	Weather Conditions	
Regions 2 to 5	 Rainfall between: 5.0 mm and 25.0 mm	Cloudy to overcast skies with scattered showers of varying intensities, intermittent rain, and isolated thundershowers can be expected over Regions 1 and 6 to 10 during the night.
