

HYDROMETEOROLOGICAL SERVICE
MINISTRY OF AGRICULTURE

WEATHER BRIEF for today Sunday, 05 October 2025, from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00 hrs Sunday, October 5, 2025, were available for most stations.

Fort Island in region 3 recorded the highest rainfall of 42.1 mm.

Severe Weather Advisory: In areas of thundershowers, lightning strikes and heavy winds may be observed.

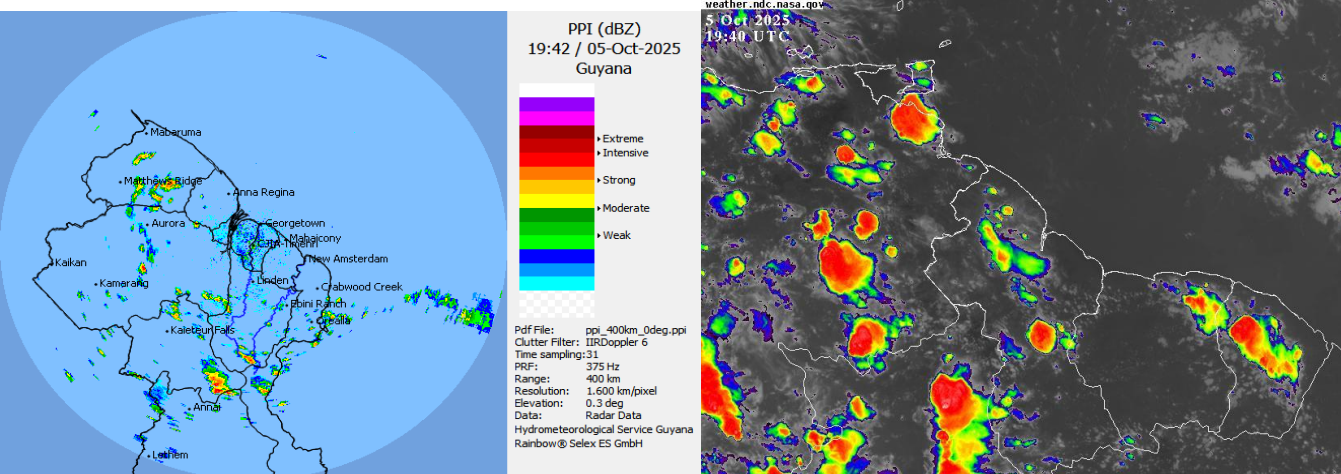

Marine advisory: Residents of low-lying, riverine, and flood-prone areas are advised to take the necessary precautions against flooding as over-topping is likely due to spring tides. In addition, long-period waves can likely result in damage to sea defenses. All marine users including seagoers, are asked to exercise caution during this time.

Synopsis: Mild to moderate instabilities were observed over Inland areas during the afternoon. The forecast area is expected to become moist and unstable as the week progresses, as low-level troughs embedded within deep moisture plumes will likely create these conditions.

Today's weather review: Cloudy skies with isolated to scattered showers were observed over Inland areas. All other areas observed partly cloudy to cloudy skies.

Sunday, 05 October 2025 (19:00 hrs – 07:00 hrs)			Monday, 06 October 2025 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions		Regions	Weather Conditions	
Coastal Regions 2 to 6	 Rainfall between: 0.0 mm and 10.0 mm	Coastal Regions 2 to 6 can expect partly cloudy to fair skies throughout the evening hours. Conditions are expected to deteriorate from the morning hours as cloudy skies with isolated to scattered showers will likely persist.
