WEATHER BRIEF for today Wednesday, 07 October 2026, from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00 hrs Wednesday, October 7, 2026 were available for most stations.

No significant rainfall was recorded in the past 24 hours.

Severe Weather Warnings. The public is advised to take all necessary precautions as warmer than usual day and night-time temperatures are likely to continue across most of Guyana. In addition, areas of thundershowers, heavy winds, and lightning strikes may be observed. Persons are asked to be alert and exercise caution in efforts to safeguard life and property.

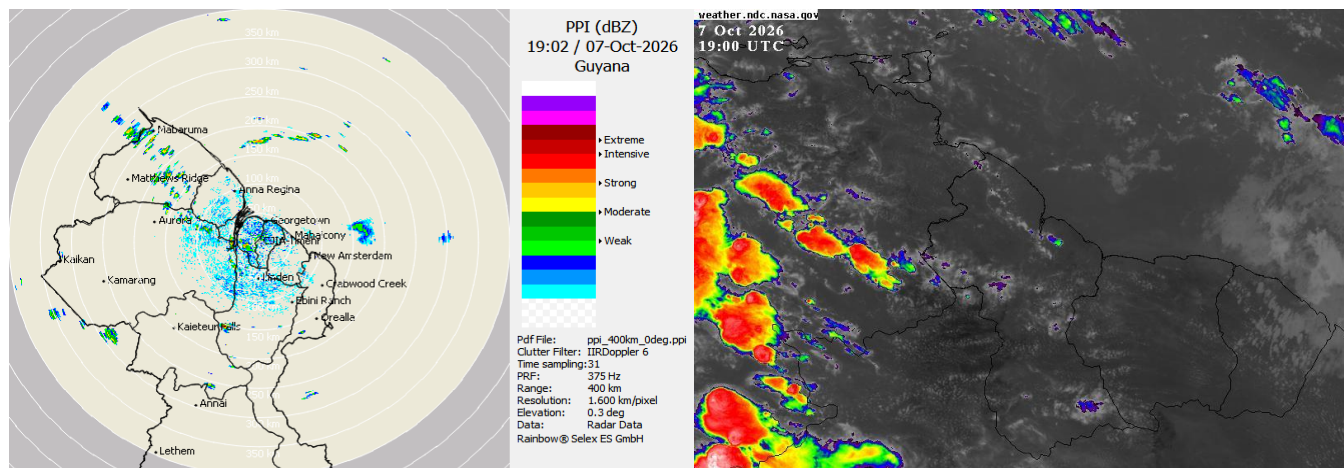

Marine advisory: The spring tide advisory is in effect. Residents of low-lying, riverine, and flood-prone areas are advised to take the necessary precautions against flooding, as overtopping is likely.

Synopsis: *Ridging throughout the atmosphere continued to produce mostly dry and stable conditions. This pattern is expected to continue for the remainder of the week. However, localized diurnal heating produced isolated pockets of instability over Inland areas along Regions 1, 2 and 7. Meteorological models indicate that during the weekend, instabilities along Coastal Guyana will likely increase as low-level forcings coupled with favorable upper-level dynamics will likely create these conditions.*

Today's weather review: Mostly fair and sunny skies were observed.
