

Hydrometeorological Service

Ministry of Agriculture, Guyana

Weather Brief for Saturday, 13 June 2026 from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00hrs Saturday, 13 June 2026 were available for most of the stations. **Kwatamang in Region 09 recorded the highest rainfall of 18.8 mm.**

Marine Advisory: Moderate to strong surface winds coupled with spring tides will likely cause dangerous sea conditions and overtopping of river and sea defenses. All persons are asked to take the necessary precautions.

Synopsis: Tropical Wave (#14) is currently affecting Guyana. The wave is not associated with any significant convection, as the Saharan Dust concentration is high and inhibits it, and mid-upper level wind shear is strong. Another tropical wave associated with the ITCZ is projected to move over Guyana on Monday and generate some instabilities.

Today's weather review: Partly cloudy skies with haze and brief showers were observed.

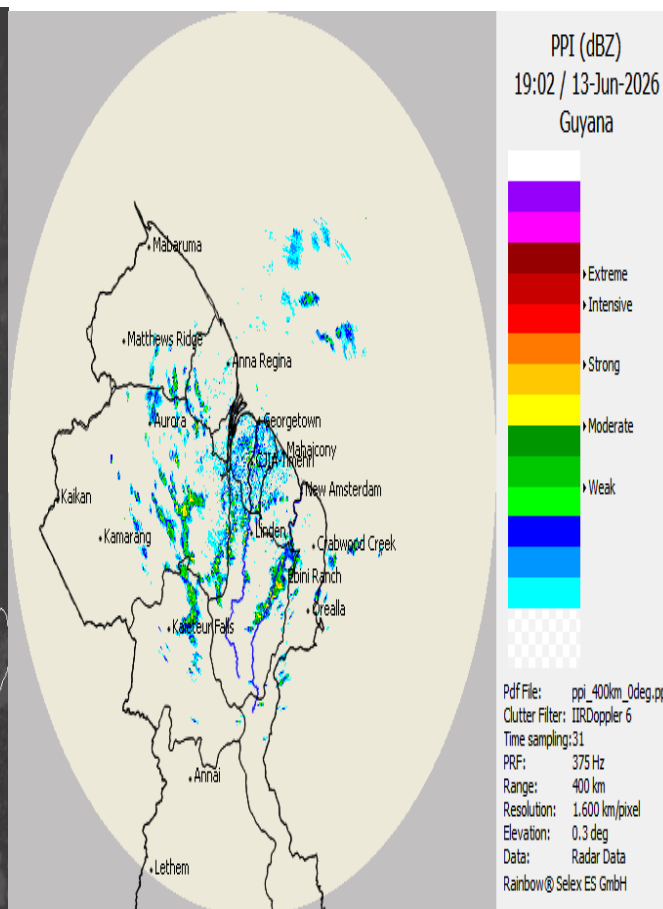

Table # 1 Weather forecast for the next twenty-four hours

Saturday, 13 June 2026 (19:00 hrs – 07:00 hrs)			Sunday, 14 June 2026 (07:00 hrs – 19:00 hrs)
