Weather Brief for Monday, 22 June 2026 from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00hrs Monday, 22 June 2026 were available for most of the stations.

West Watooka Region 10 recorded the highest rainfall of 58.2 mm.

Severe Weather Advisory: Areas affected by thundershowers may experience strong wind gusts, heavy rainfall, and possible lightning strikes. Residents are advised to exercise caution during these conditions.

Marine Advisory: Spring tides will likely cause overtopping of river and sea defenses. All persons in low-lying and riverine areas are asked to take the necessary precautions.

Synopsis: Induced trough from approaching Tropical Wave (#19) embedded within the ITCZ generated instabilities over most of northern regions of the forecast area. The Tropical wave is expected to continue to affect northern regions of the forecast area tonight into tomorrow as it moves west between 15 and 20 kt, and another wave is also to follow, with instabilities continuing into Wednesday.

Today's weather review: Regions 7, 8 and 10 observed cloudy skies with frequent showers and isolated thundershowers. Elsewhere partly cloudy to cloudy skies with brief showers.
