**MINISTRY OF AGRICULTURE**

Weather Brief for Monday, 08 June 2026 from the Hydrometeorological Service, Guyana.

Rainfall records for the past 24 hours, measured at 08:00hrs available for most of the stations.

**Kwatamang in Region 9 recorded the highest rainfall of 84.4 mm.**

**Synopsis:** Weak atmospheric instabilities are currently affecting Guyana and are expected to persist until late Tuesday. Thereafter, a gradual regeneration and strengthening of the Inter-Tropical Convergence Zone (ITCZ) is forecast to oscillate across the country, reintroducing unstable weather conditions and increasing moisture availability. This pattern will support persistent cloudiness, intermittent to frequent showers, and thunderstorms until early Friday. Conditions are expected to become most significant on Thursday as the ITCZ interacts with Tropical Wave (#12), enhancing low-level moisture convergence and convective activity across Guyana.

**Today's weather review:** A mix of sunshine and clouds was observed across Guyana, with thundershowers in the afternoon over southern Guyana, and elsewhere, brief showers.

Table # 1 Weather forecast for the next twenty-four hours

Monday, 08 June 2026 (19:00 hrs – 07:00hrs)			Tuesday, June 9, 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions	Fair to occasionally cloudy skies are expected across Guyana, with scattered showers.	Regions	Weather Conditions	Cloudy skies are expected across Guyana, with scattered to intermittent showers.
