Ministry of Agriculture, Guyana

Weather Brief for Saturday, 14 March 2026 from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00hrs Saturday, 14 March 2026 were available for most of the stations. **Richmond Hill in Region 3 recorded the highest rainfall of 61.3 mm.**

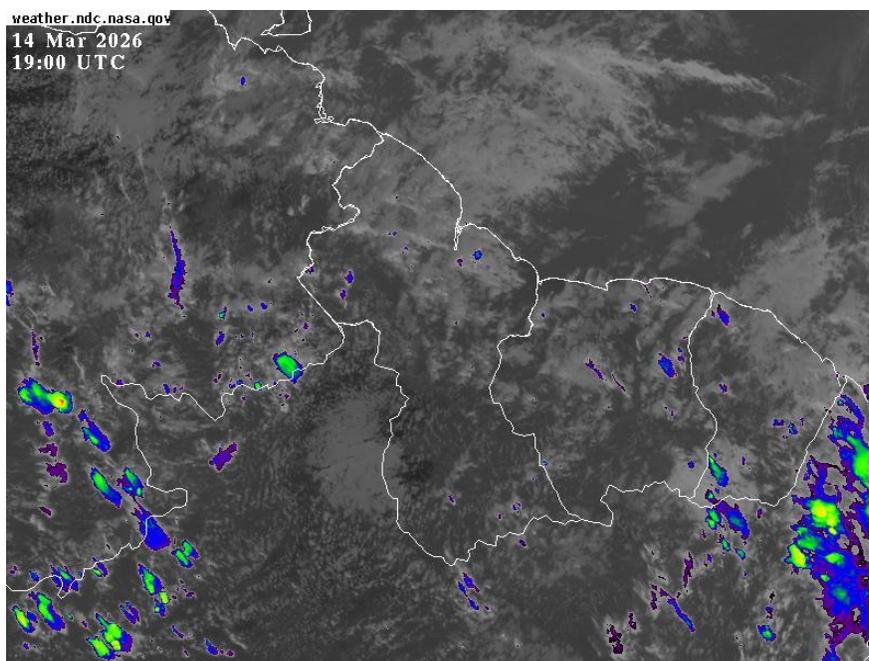

Synopsis: Wind shear and subsidence between 500 and 250 hPa, and wind shear between 700 and 500 hPa are limiting deep convective rainfall activity. However, due to very high moisture from surface to 700 hPa, a well-established 700 hPa anticyclone north of Guyana, and a ridge extending from Brazil into southern Guyana supporting a confluence pattern with embedded troughs, generating weak to moderate, mainly stratified rainfall activity. These conditions are projected to persist into Monday, after which gradual decreasing moisture and a strengthening ridge with subsidence should lead to more stable conditions.

Today's weather review: Southern regions 6 and 9 observed partly cloudy to cloudy skies with brief light showers. Remaining regions observed cloudy skies with intermittent light to moderate showers and rain.

Table # 1 Weather forecast for the next twenty-four hours

Saturday, 14 March 2026 (19:00 hrs – 07:00 hrs)			Sunday, 15 March 2026 (07:00 hrs – 19:00 hrs)		
	Weather Conditions	Cloudy skies with occasional light to moderate showers over regions 1 and 7, elsewhere fair to partly cloudy skies with a few passing showers.		Weather Conditions	Southern regions 6 and 9 can expect partly cloudy to cloudy skies with frequent showers, while the remaining regions can expect cloudy skies with intermittent light to moderate showers and rain.
Regions 1 & 7.	 Rainfall between 5 & 15 mm	<u>Winds:</u> Light to moderate easterly breeze.	Southern regions 6 & 9.	 Rainfall between 10 & 25 mm	<u>Winds:</u> Moderate to fresh easterly breeze.
Other regions.	 Rainfall between 0 & 5 mm	<u>Minimum temperatures:</u> Coast: 22 °C – 25°C Hinterland: 19 °C – 23 °C	Other regions.	 Rainfall between 20 & 60 mm	<u>Maximum temperatures:</u> Coast: 27 °C – 31 °C Hinterland: 26 °C – 30 °C

The long-term daily average rainfall for Georgetown for the next 10 days, March 15 to 24, 2026, is 3.1 mm per day.

Infrared Satellite valid 19:00 UTC (15:00hrs) Saturday, 14 March 2026.

Our Mission: To Observe, archive and understand Guyana's weather, and Climate and provide meteorological, hydrological and oceanographic service in support of Guyana's national needs and international obligation.
