Weather Brief for Friday, 15 May 2026 from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00hrs Friday, 15 May 2026 were available for most of the stations. **Letter Kenny in Region 6 recorded the highest rainfall of 47.8mm.**

Marine Advisory: Strong surface winds will generate dangerous seas, which, coupled with spring tides, will likely cause overtopping and damage to river and sea defenses in vulnerable areas. Coastal residents, fisherfolk, seagoers, and other marine users are advised to exercise extreme caution during this time.

Synopsis: Based on various global weather prediction models and analysis from other products, low-level convergence and confluence induced by a tropical wave to the north-northeast of Guyana (13N 55W at 12 UTC) associated with scattered showers, generated isolated to scattered instabilities over Guyana.

Today's weather review: Inland regions 1 and 6 to 10 observed mostly cloudy skies with occasional showers and isolated thunderstorms. Elsewhere, observed partly cloudy and sunny skies with isolated showers.

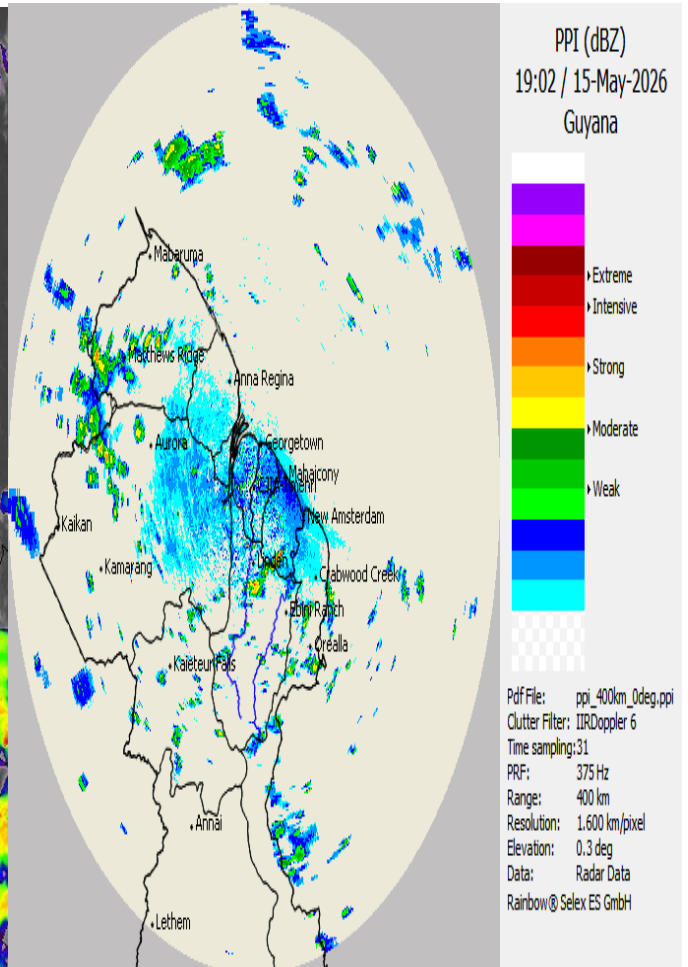

Table # 1 Weather forecast for the next twenty-four hours

Friday, 15 May 2026 (19:00 hrs – 07:00 hrs)			Saturday, 16 May 2026 (07:00 hrs – 19:00 hrs)		
	Weather Conditions	Inland regions 1, 7, 8, and 10 can expect cloudy skies with occasional showers. Elsewhere, partly cloudy skies with brief morning showers.		Weather Conditions	Mostly cloudy skies with intermittent showers and rain. These conditions are likely in the morning over the coast and elsewhere in the afternoon.
