

Weather Brief for Sunday, 04 October 2026 from the Hydrometeorological Service, Guyana

Rainfall records for the past 24 hours, measured at 08:00 hrs, Sunday, 04 October 2026 were available for most of the stations. **Mahdia in Region 8 recorded the highest Rainfall of 55.8 mm.**

Severe Weather Warning: **Areas with thundershowers may experience gusty winds and lightning strikes. Persons are advised to remain alert and exercise caution to protect life and property.**

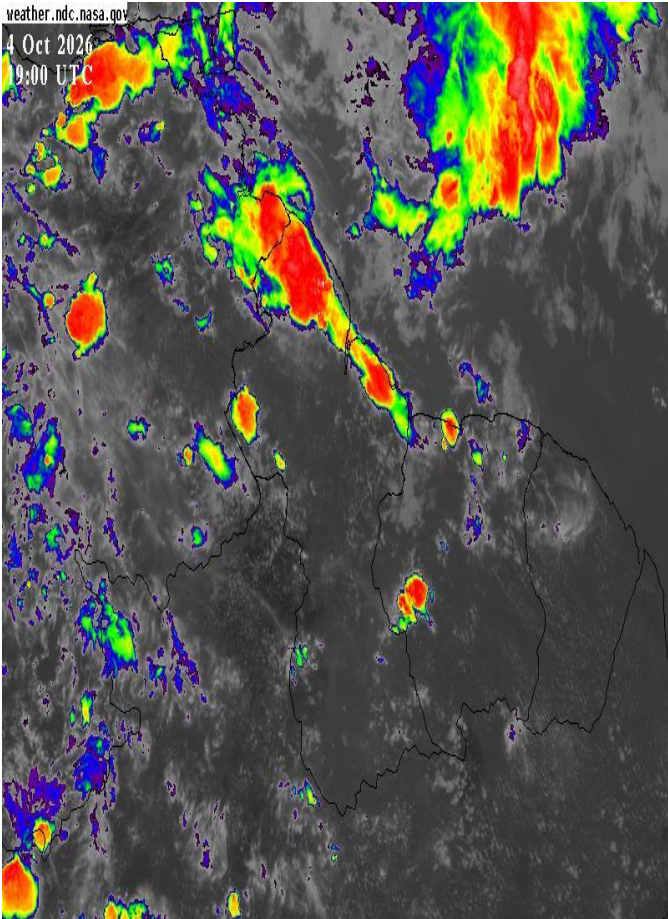

Synopsis: Moisture and instabilities associated with the tropical wave and low-level convergence produced weak instabilities over most of the forecast area as mid-upper-level shear weakens deep long-lived convection. Weak to moderate instabilities are expected to continue tonight into tomorrow morning, after which, for most of the forecast regions, mainly stable conditions are projected.

Today's weather review: Partly cloudy to cloudy skies with frequent showers and scattered thundershowers were observed across most of Guyana.

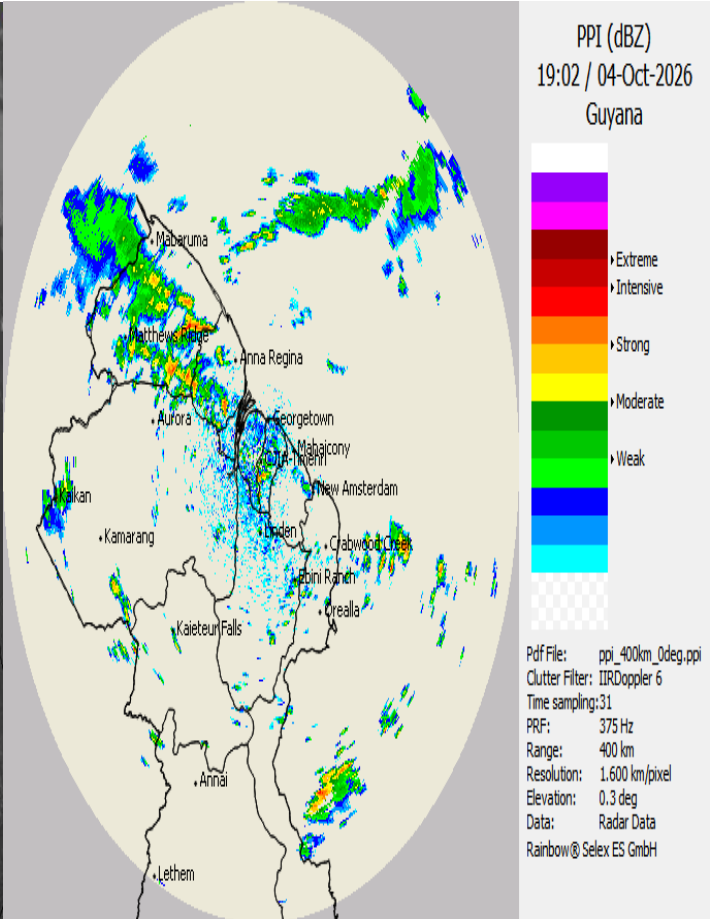

Table # 1 Weather forecast for the next twenty-four hours

Sunday, 04 October 2026 (19:00 hrs – 07:00 hrs)			Monday, 05 October 2026 (07:00 hrs – 19:00 hrs)
