

HYDROMETEOROLOGICAL SERVICE
MINISTRY OF AGRICULTURE

Weather Brief for Monday, 12 October 2026 from the Hydrometeorological Service, Guyana.

Matthews Ridge Region 1 recorded the highest rainfall 21.5 in the past 24 hours.

Synopsis: The ITCZ is generating mild to moderate atmospheric instability across Regions 1 to 5 and 7, supporting periods of convective activity. Meanwhile, dry air and subsidence over southern Guyana are maintaining generally stable conditions. Over the next few days, daytime heating, combined with shallow moisture embedded within the trade-wind flow, is expected to support mainly shallow and localized convection. Thereafter, increasing dry-air intrusion and subsidence are expected to promote a return to predominantly dry and stable conditions across much of Guyana.

Today's weather review: Northern Guyana saw mostly cloudy skies with scattered showers and isolated thunderstorms. All other areas saw mostly fair and sunny skies with a few cloudy periods and possible isolated showers.

Table # 1 Weather forecast for the next twenty-four hours

Monday, 12 October 2026(19:00 hrs – 07:00hrs.)			Tuesday 13 October, 2026 (07:00 hrs – 19:00 hrs.)		
Regions	Weather Conditions		Regions	Weather Conditions	
Regions 1 to 10	 Rainfall is expected between 0 and 10 mm.	Mostly fair to occasionally cloudy skies can be expected throughout Guyana with a few isolated showers.	Regions 1 to 10	 Rainfall is expected to be between 10 and 20 mm.	Sunny skies are expected during the morning, becoming cloudy from late morning into the early afternoon, with scattered showers and isolated thunderstorms developing over inland areas.
		<u>Winds:</u> gentle to moderate northeast to easterly breeze.			<u>Winds:</u> moderate to fresh northeast to easterly breeze.
		<u>Minimum temperatures:</u>			<u>Maximum temperatures:</u>
		Coast: 24 °C – 25°C			Coast: 32 °C – 34°C
		Hinterland: 22 °C – 24 °C			Hinterland: 34 °C – 37 °C

The long-term daily average rainfall for Georgetown for the next 10 days, October 13, 2026 to October 22, 2026, is 2.0mm per day.

Table # 2 Occurrences of high and low tides for the next 24 hours and the times for sunrise and sunset.

SPRING TIDE ADVISORY: The public is reminded that the Spring Tide Advisory remains in effect until this evening. During this period of high tide, higher-than-normal water levels may overtop sea and river defences, flood low-lying coastal and riverine areas, and create hazardous conditions along shorelines and waterways.

Our Mission: To Observe, archive and understand Guyana’s weather, and Climate and provide meteorological, hydrological and oceanographic service in support of Guyana’s national needs and international obligation.

HYDROMETEOROLOGICAL SERVICE **MINISTRY OF AGRICULTURE**

Tonight (October 12, 2026)	Tomorrow Morning (October 13, 2026)		Tomorrow Afternoon (October 13, 2026)
Low Tide 23:12 hrs, Height 0.52 m	High Tide 05:14 hrs, Height 2.78 m Low Tide 11:11 hrs, Height 0.81 m		High Tide 17:23 hrs, Height 2.86 m
Sunrise:	05:38 hrs	Sunset:	17:36 hrs

Open waters are expected to be gentle to moderate, with northeasterly waves reaching 1.0 to 2.0 meters (3 to 5 feet) and steady.

- These waves will likely have periods of between 5 and 8 seconds.
- Gentle to moderate northeast to easterly breeze
