Weather Brief for Monday, 05 October 2026 from the Hydrometeorological Service, Guyana.

Lama in Region 4 recorded the highest rainfall of 82.9 mm in the past 24 hours.

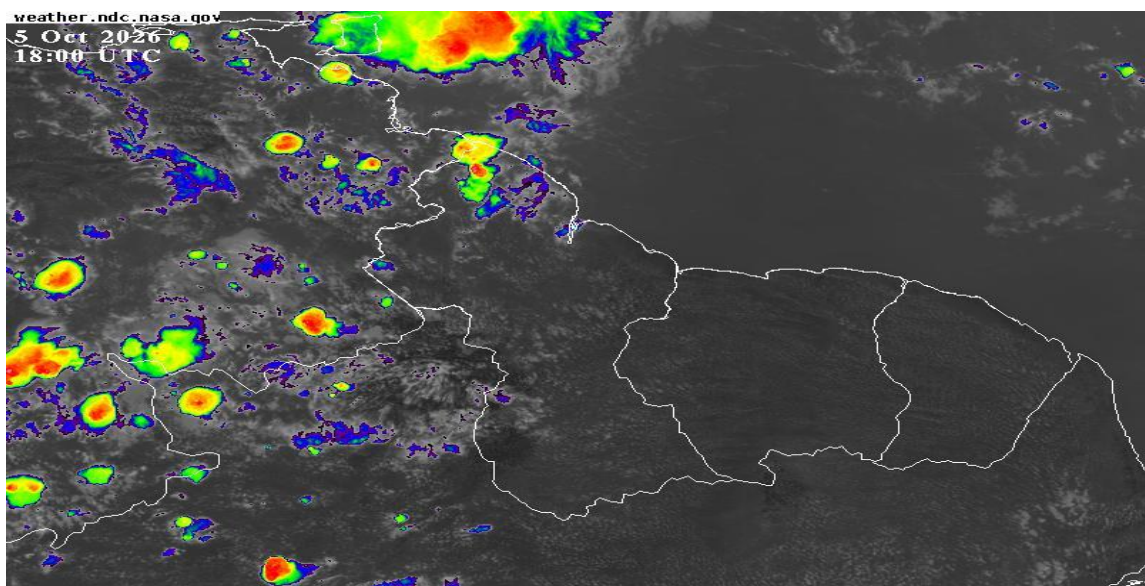

Synopsis: Weak instability will persist across Guyana through the remainder of the week. In the absence of significant large-scale forcing, convective development will be primarily driven by diurnal heating and local topographic influences, with isolated to locally scattered convection possible where conditions become favourable.

Today's weather review: Cloudy skies with scattered showers were observed over Regions 1 and 2. Elsewhere, mainly fair and sunny skies were observed.

Table # 1 Weather forecast for the next twenty-four hours

Monday, October 5, 2026 (7 pm to 7 am)			Tuesday, October 6, 2026 (7 am to 7 pm)		
Regions	Weather Conditions	Mostly fair skies can be expected throughout Guyana.	Regions	Weather Conditions	A mix of sunshine and clouds is expected across Guyana, with possible passing showers over Regions 1 and 2 in the afternoon.
