

HYDROMETEOROLOGICAL SERVICE
MINISTRY OF AGRICULTURE

Weather Brief for Friday, 09 October 2026 from the Hydrometeorological Service, Guyana.

Johanna South Region 6 recorded the highest rainfall, 7.1 mm, in the past 24 hours.

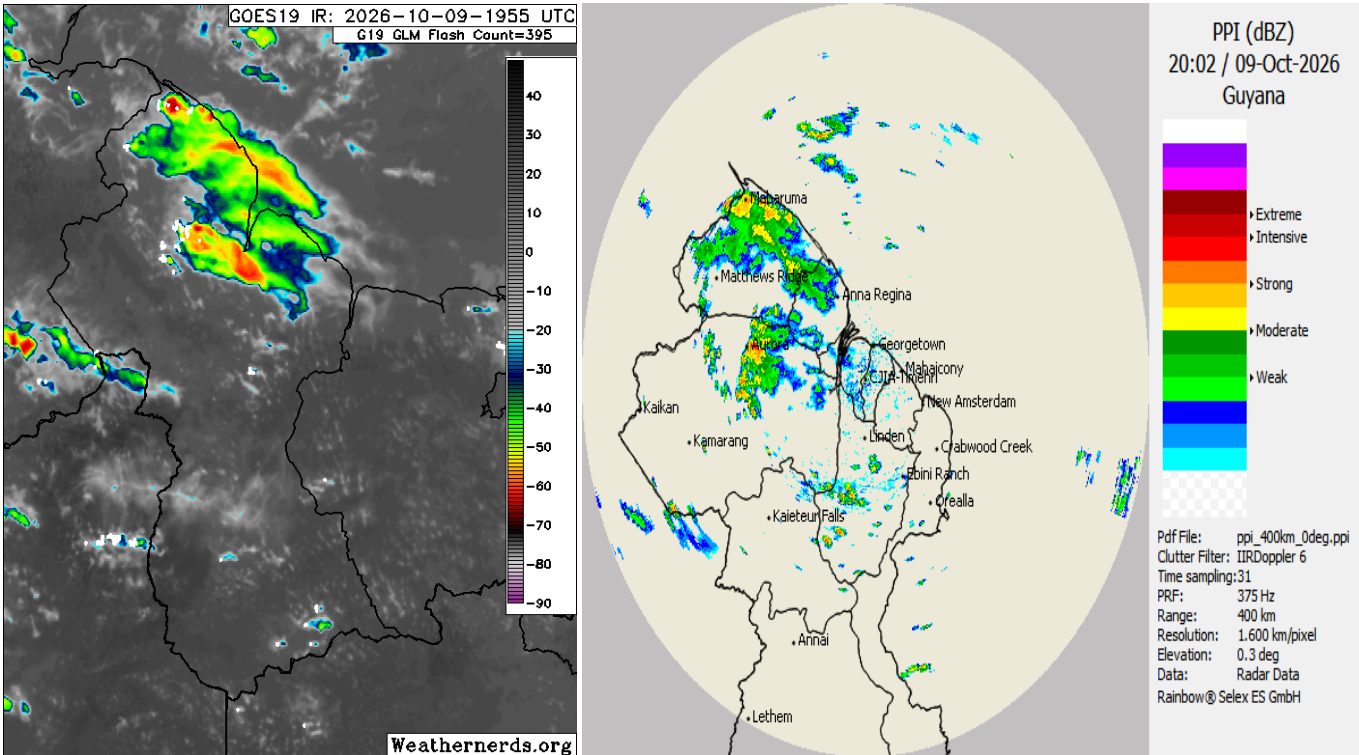

Synopsis: Moderate to strong atmospheric instability, associated with a weak trough, affected coastal and inland areas, supporting periods of convective activity. Elsewhere, relatively dry air and subsidence remained the dominant influences, limiting significant cloud development and precipitation.
From Sunday through Tuesday, the Intertropical Convergence Zone (ITCZ) is forecast to oscillate over Guyana, resulting in increased moisture and instability. Consequently, an increase in showery activity is anticipated, with conditions becoming favourable for occasional thunderstorms and locally heavy rainfall.

Today's weather review: Cloudy skies with thundershowers were observed over inland areas from mid-morning into the afternoon. Elsewhere, sunny skies were observed.

Table # 1 Weather forecast for the next twenty-four hours

Friday, October 9, 2026 (7 pm to 7 am)			Saturday, October 10, 2026 (7 am to 7 pm)		
Regions	Weather Conditions		Regions	Weather Conditions	
Regions 1 to 10	 No significant rainfall is expected.	Mostly fair skies can be expected throughout Guyana, with a few isolated showers during the early evening over inland areas.	Regions 1 to 10	 Rainfall is expected to be between 10 and 20 mm over Regions 1 and 7; elsewhere, no significant rainfall is expected.	Sunny skies can be expected throughout Guyana for most of the day. In the afternoon, thundershowers are likely over Regions 1 and 7.
		<u>Winds:</u> gentle to moderate northeast to easterly breeze. <u>Minimum temperatures:</u> Coast: 25 °C – 26°C Hinterland: 24 °C – 25 °C			<u>Winds:</u> moderate to fresh northeast to easterly breeze. <u>Maximum temperatures:</u> Coast: 33 °C – 34°C Hinterland: 34 °C – 37 °C

The long-term daily average rainfall for Georgetown for the next 10 days, October 9, 2026 to October 18, 2026, is 1.8 mm per day.

Table # 2 Occurrences of high and low tides for the next 24 hours and the times for sunrise and sunset.

SPRING TIDE ADVISORY: The public is reminded that the Spring Tide Advisory remains in effect through Tuesday, October 13, 2026. During this period of high tide, higher-than-normal water levels may result in overtopping of sea and river defences, flooding of low-lying coastal and riverine areas, and hazardous conditions along shorelines and waterways.

Tonight (October 09, 2026)	Tomorrow Morning (October 10, 2026)		Tomorrow Afternoon (October 10, 2026)
Low Tide 21:13 hrs, Height 0.49 m	High Tide 03:23 hrs, Height 2.98 m Low Tide 09:35 hrs, Height 0.62 m		High Tide 15:55 hrs, Height 3.11 m
Sunrise:	05:38 hrs	Sunset:	17:38 hrs

Sea conditions:

Open waters are expected to be gentle to moderate, with northeasterly waves reaching 1.0 to 2.0 meters (4 to 5 feet) and steady.

- These waves will likely have periods of between 5 and 6 seconds.
- Moderate easterly breeze

Extended Forecast

Sunday to Tuesday: Mostly cloudy skies can be expected across Guyana with occasional showers and thundershowers. Rainfall is anticipated to be between 20 and 50 mm.

Wednesday and Thursday: Sunny skies expected. No significant rainfall is likely.
