MINISTRY OF AGRICULTURE

Weather Brief for Friday, 12 December 2025 from the Hydrometeorological Service, Guyana
Rainfall records for the past 24 hours, measured at 08:00hrs Friday, 12 December 2025 were available for most of the stations. **Karawab in Region 2 recorded the highest rainfall of 92.9 mm.**

Severe Weather Advisory: In areas of thundershowers, heavy winds and possible lightning strikes may be observed. Persons are encouraged to exercise all precautions to safeguard life and property.

Marine Advisory: Rough seas will likely produce hazardous sea conditions, coupled with spring tides can lead to over-topping and damage of river and sea defences along low-lying and riverine areas. Persons are advised to exercise caution to protect their lives and property.

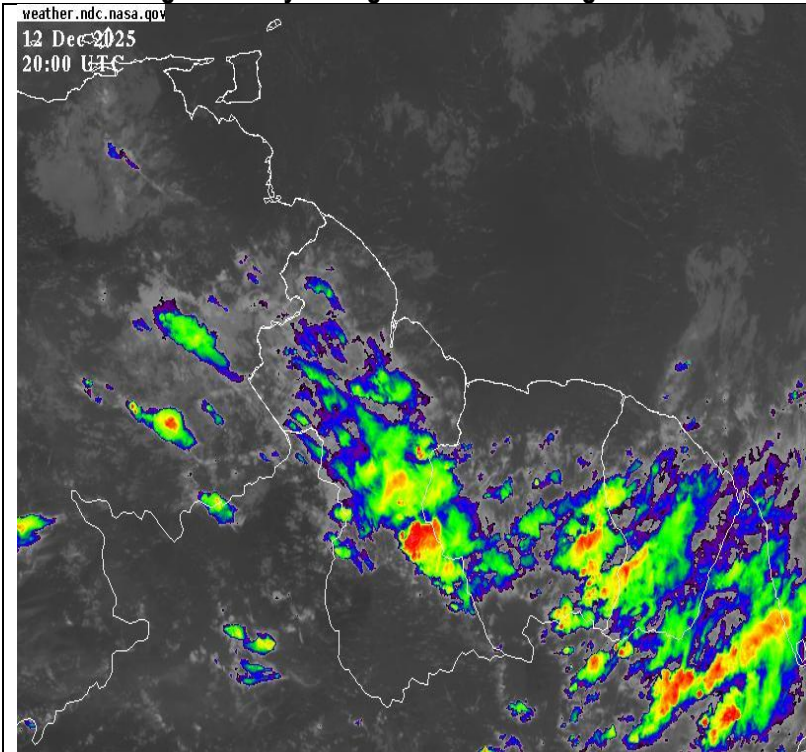

Synopsis: Continued building and meandering of the Atlantic high-pressure system, generating moderate to fresh winds, as trade wind moisture plumes enhance low-level convergence, producing instabilities across the forecast area. Models show similar atmospheric dynamics for the next 3 days.

Today’s weather review: Morning cloudy skies with intermittent showers and rain were observed over coastal regions, other regions observed cloudy skies with moderate to heavy showers and thundershowers mid-morning into the afternoon.

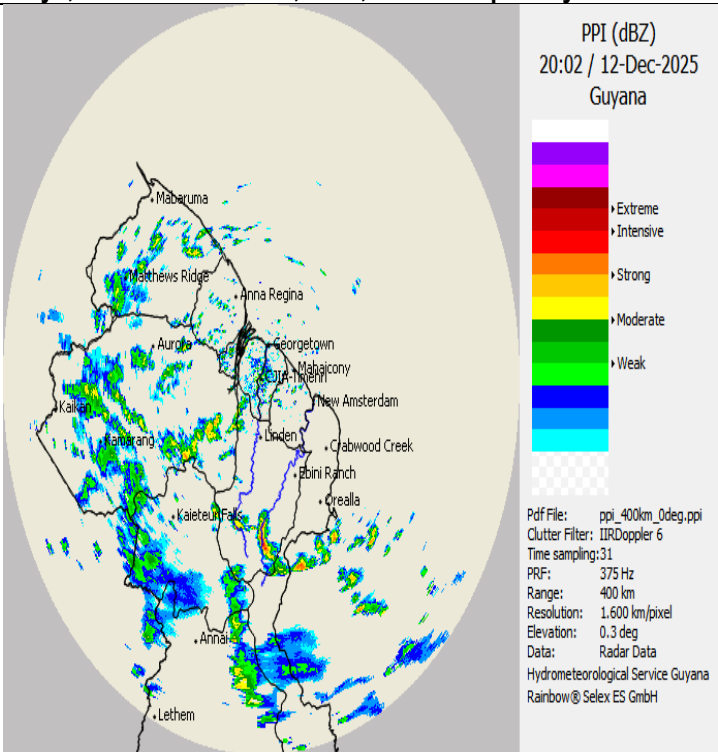

Table # 1 Weather forecast for the next twenty-four hours

Friday, 12 December 2025 (19:00 hrs – 07:00 hrs)			Saturday, 13 December 2025 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions	Coastal regions can expect morning cloudy spells with brief showers. Other regions can expect cloudy skies with light to moderate showers and thundershowers.	Regions	Weather Conditions	Coastal regions can expect morning cloudy spells with intermittent showers and rain. Other regions can expect cloudy skies with moderate to heavy showers and thundershowers.
