

HYDROMETEOROLOGICAL SERVICE
MINISTRY OF AGRICULTURE

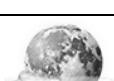

Weather Brief for Friday, 02 January 2026 from the Hydrometeorological Service, Guyana
 Rainfall records for the past 24 hours, measured at 08:00hrs Friday, 02 January 2026 were available for most of the stations.
 The highest rainfall was recorded at MMA Abari in Region 5 at 37.4 mm.

Marine Advisory: Long-period waves coupled with spring tides may cause overtopping and damage to river and sea defences in vulnerable areas. Persons are asked to exercise all precautionary measures during this time.

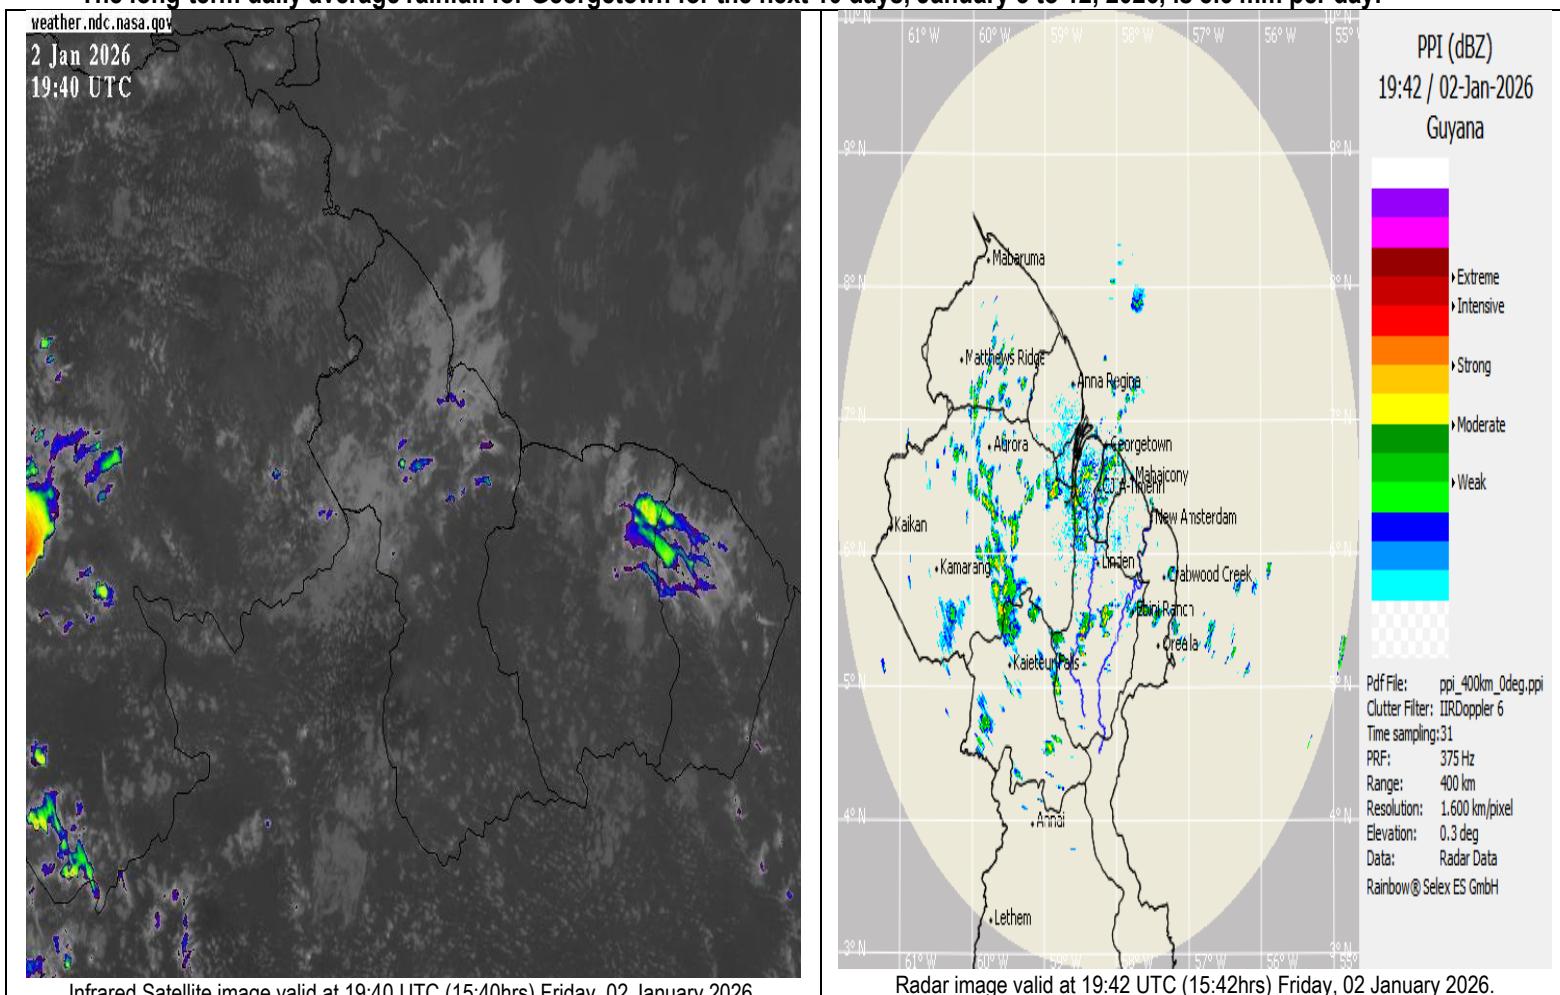

Synopsis: Moisture convergence and low level trough produced weak to moderate instabilities over the northern parts of Guyana. Similar atmospheric conditions are projected for next week.

Today's weather review: Northern regions of Guyana observed cloudy skies with intermittent showers and rain, elsewhere observed partly cloudy and sunny skies with isolated showers.

Table # 1 Weather forecast for the next twenty-four hours

Friday, 02 January 2026 (19:00 hrs – 07:00 hrs)		Saturday, 03 January 2026 (07:00 hrs – 19:00 hrs)
