

HYDROMETEOROLOGICAL SERVICE
MINISTRY OF AGRICULTURE

Weather Brief for Tuesday, 20 January 2026 from the Hydrometeorological Service, Guyana
Rainfall records for the past 24 hours, measured at 08:00hrs Tuesday, 20 January 2026 were available for most of the stations. **Mahdai Region 8 recorded the highest rainfall of 54.0 mm.**

Marine Advisory: Spring tide, coupled with moderate to rough seas will likely cause overtopping and damage to the river and sea defense. Marine users and persons in riverine and low-lying areas should take the necessary precautions.

Synopsis: Weak low-level trough maintaining enhanced moisture convergence across the country continues to generate weak to moderate instabilities. To the north and northeast, a strong subtropical high (≈1033 hPa) over the central Atlantic dominates the pressure pattern, producing a moderate east-northeasterly trade wind flow over Guyana and adjacent coastal waters.

Today’s weather review: Mostly cloudy skies with light to moderate showers and rain were observed over the forecast area. Coastal areas conditions improved in the afternoon hours.

Table # 1 Weather forecast for the next twenty-four hours

Tuesday, 20 January 2026 (19:00 hrs – 07:00 hrs)			Wednesday, 21 January 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions	Partly cloudy to cloudy skies with brief showers are likely across Guyana. Winds: Light to moderate easterly breeze. <u>Minimum temperatures:</u> Coast: 23 °C – 26°C Hinterland: 21 °C – 25 °C	Regions	Weather Conditions	Partly cloudy to cloudy skies are likely across Guyana. Coastal regions can expect brief showers, and elsewhere, frequent showers. Winds: Gentle to Fresh easterly breeze. <u>Maximum temperatures:</u> Coast: 27 °C – 31 °C Hinterland: 28 °C – 32 °C
