MINISTRY OF AGRICULTURE

Weather Brief for Friday, 23 January 2026 from the Hydrometeorological Service, Guyana
 Rainfall records for the past 24 hours, measured at 08:00hrs Friday, 23 January 2026 were available for most of the stations.
 Fort Island in Region 3 recorded the highest rainfall of 27.8 mm.

Marine Advisory: Spring tide, coupled with moderate to rough seas, will likely cause overtopping and damage to the river and sea defense. Marine users and persons in riverine and low-lying areas should take the necessary precautions.

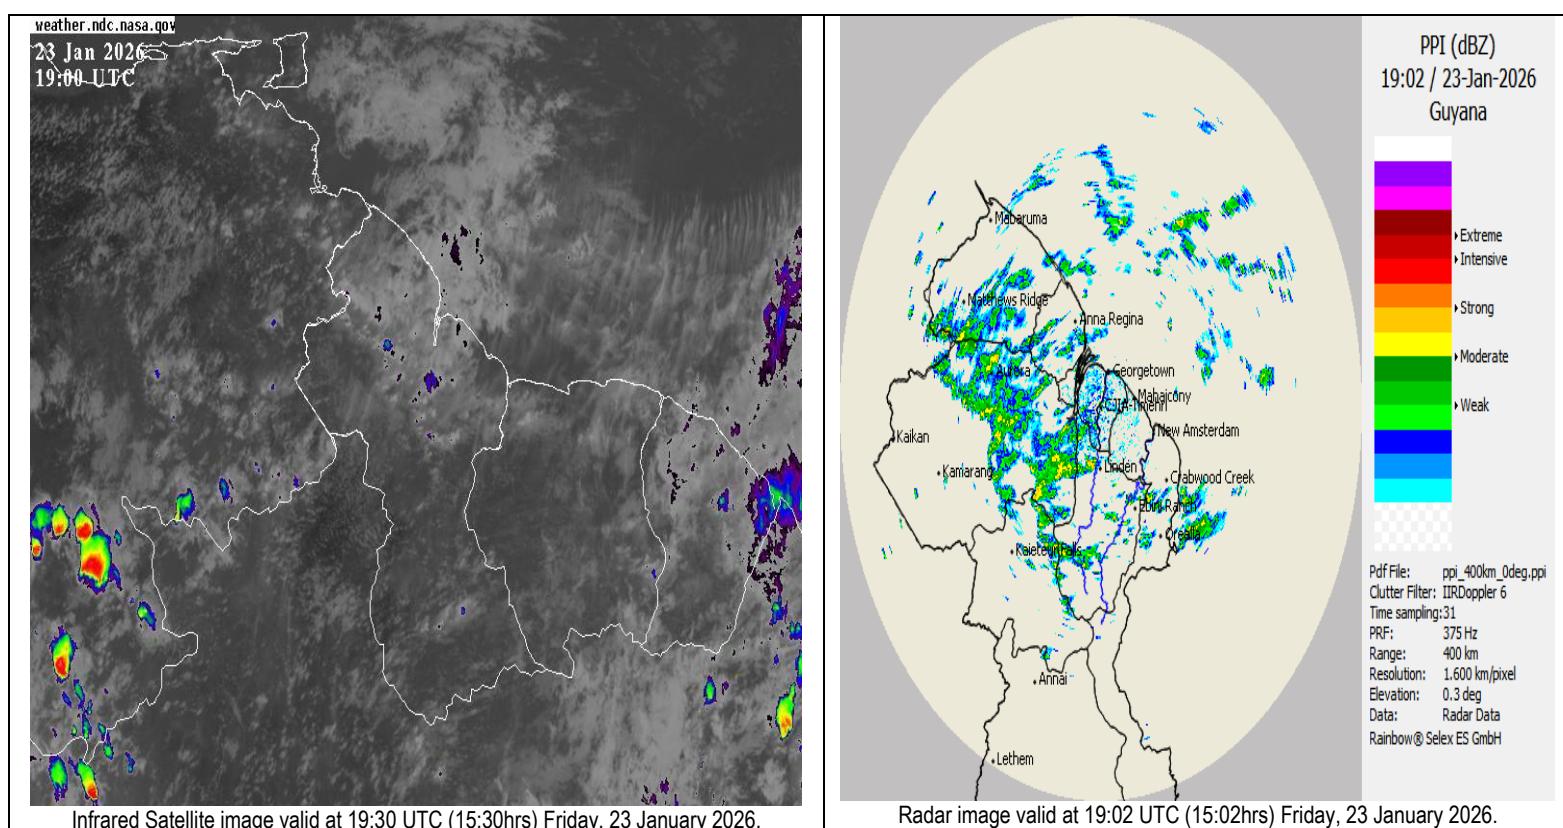

Synopsis: To the north and northeast, a strong subtropical high (≈ 1032 hPa) over the central Atlantic dominates the pressure pattern, producing a moderate east-northeasterly trade wind flow over Guyana and adjacent coastal waters. High moisture between 850 and 700 hPa, as weak moisture convergence, localized conditions with additional tradewind plumes, produced weak instabilities over the forecast area. Models indicate a similar pattern for the next week, with the exception of increased instabilities on Monday.

Today's weather review: Southern regions 6 and 9 can expect partly cloudy and sunny skies with passing showers. Elsewhere, partly cloudy to cloudy skies with light to moderate showers and rain, these conditions improved over coastal Guyana in the afternoon, as it moved over inland regions.

Table # 1 Weather forecast for the next twenty-four hours

Friday, 23 January 2026 (19:00 hrs – 07:00 hrs)		Saturday, 24 January 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions	Regions	Weather Conditions	
Southern regions 6 & 9.	 No significant rainfall.	Inland and coastal regions.	 Rainfall between 5 & 25 mm.	Partly cloudy to cloudy skies are likely across Guyana. Coastal and inland regions can expect light to moderate showers and rain, and the remaining regions a few showers. Winds: Gentle to moderate easterly breeze.
Other regions.	 Rainfall between 0 & 5 mm.	Southern regions 6 & 9.	 Rainfall between 0 & 5 mm.	<u>Maximum temperatures:</u> Coast: 27 °C – 31 °C Hinterland: 27 °C – 31 °C

The long-term daily average rainfall for Georgetown for the next 10 days, January 24 to February 02, 2026, is 6.1 mm per day.

Table # 2: Occurrences of high and low tides for the next 24 hours and the times for sunrise and sunset.

Tonight (January 23, 2026)	Morning (January 24, 2026)	Afternoon (January 24, 2026)
High Tide 19:18hrs Tide Height 2.82m	Low Tide 01:18hrs Tide Height 0.69m High Tide 07:17hrs Tide Height 2.81m	Low Tide 13:45hrs Tide Height 0.87m
Sunrise:	06:09hrs	Sunset:
		17:57hrs

Spring Tide Advisory: The spring tide is in effect.

Sea conditions:

Moderate to rough in open waters with north to northeasterly waves reaching 2.5 to 3.0 meters (6 to 9 ft) and steady.

- These waves will likely have periods of 9 and 10 seconds
- Moderate Easterly breeze.

Extended Forecast

Sunday and Tuesday through Thursday: Partly cloudy to cloudy skies are likely across Guyana. Coastal and inland regions can expect light to moderate showers and rain, and the remaining regions a few showers. Rainfall is expected between 5 mm and 30 mm over inland and coastal regions, elsewhere between 0 mm and 5 mm within 24 hours.

Monday: Cloudy skies with scattered to occasional showers and rain are likely over Guyana. Rainfall is expected between 20 mm and 50 mm within 24 hours.
