

HYDROMETEOROLOGICAL SERVICE
MINISTRY OF AGRICULTURE

Weather Brief for Friday, 30 January 2026 from the Hydrometeorological Service, Guyana
Rainfall records for the past 24 hours, measured at 08:00hrs Friday, 30 January 2026 were available for most of the stations.
Leguan in Region 3 recorded the highest rainfall of 35.1 mm.

Marine Advisory: Spring tides coupled with moderate to fresh surface winds will likely create dangerous sea conditions and possible overtopping of river and sea defences. All marine users should remain on high alert, and persons living in low-lying coastal and riverine areas should take all necessary precautions.

Synopsis: A very dry 700 to 250 hPa layer with wind shear inhibits vertical development of clouds; however, localized conditions with moisture convergence produce some mild to moderate periods of instability over the country, with more showers persisting over inland regions.

Today’s weather review: Partly cloudy and sunny skies with scattered to occasional showers were observed over Guyana. Coastal regions became mostly fair and sunny by early afternoon.

Table # 1 Weather forecast for the next twenty-four hours

Friday, 30 January 2026 (19:00 hrs – 07:00 hrs)			Saturday, 31 January 2026 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions		Regions	Weather Conditions	
Inland regions 6 to 9.	 Rainfall between 0 & 10 mm.	Inland regions 6 to 9 can expect cloudy skies with scattered showers, elsewhere mostly fair skies with a few passing showers in the morning. Winds: Moderate to fresh easterly breeze.	Inland regions 6 to 10.	 Rainfall between 0 & 15 mm.	Inland regions 6 to 10 can expect partly cloudy and sunny skies with scattered to occasional showers, elsewhere mostly fair and sunny skies. Winds: Moderate to fresh easterly breeze.
Other regions.	 No significant rainfall.	<u>Minimum temperatures:</u> Coast: 21 °C – 25°C Hinterland: 19 °C – 23 °C	Other regions.	 No significant rainfall.	<u>Maximum temperatures:</u> Coast: 27 °C – 31 °C Hinterland: 27 °C – 31 °C

The long-term daily average rainfall for Georgetown for the next 10 days, January 31 to February 09, 2026, is 4.5 mm per day.

Our Mission: To Observe, archive and understand Guyana’s weather, and Climate and provide meteorological, hydrological and oceanographic service in support of Guyana’s national needs and international obligation.

Table # 2: Occurrences of high and low tides for the next 24 hours and the times for sunrise and sunset.

Tonight (January 30, 2026)	Morning (January 31, 2026)		Afternoon (January 31, 2026)
<p>Low Tide 20:37hrs Tide Height 0.59m</p>	<p>High Tide 03:11hrs Tide Height 2.76m</p> <p>Low Tide 08:42hrs Tide Height 0.75m</p>		<p>High Tide 14:47hrs Tide Height 3.00m</p>
Sunrise:	06:10hrs	Sunset:	18:00hrs

Spring Tide Advisory: The spring tide is in effect.

Sea conditions:

Moderate to rough in open waters with north to northeasterly waves reaching 2.5 to 3.0 meters (6 to 9 ft) and steady.

- These waves will likely have periods of 8 and 9 seconds
- Fresh Easterly breeze.

Extended Forecast

Sunday through Thursday: Inland regions 6 to 10 can expect partly cloudy and sunny skies with scattered to occasional showers, elsewhere mostly fair and sunny skies. Rainfall is expected between 0 mm and 15 mm over inland regions 6 to 10; elsewhere, no significant rainfall is likely within 24 hours.

For the Current Regional climate forecast, please see the latest Seasonal Climate Outlook, which is available on the Hydrometeorological Service's website <https://hydromet.gov.gy>

An update in the bulletin is provided daily by the Hydromet Service.
Specialist Meteorologist: Doodnauth Ramlakhan
