Weather Brief for Friday, 07 November 2025 from the Hydrometeorological Service, Guyana
Rainfall records for the past 24 hours, measured at 08:00hrs Friday, 07 November 2025 were available for most of the stations. **Novar in Region 5 recorded the highest rainfall of 95.5 mm.**

Marine Advisory: Spring tides coupled with high-energy waves will likely cause overtopping and damage to river and sea defenses. Marine users and persons along coastal and riverine areas are advised to exercise caution to safeguard life and property.

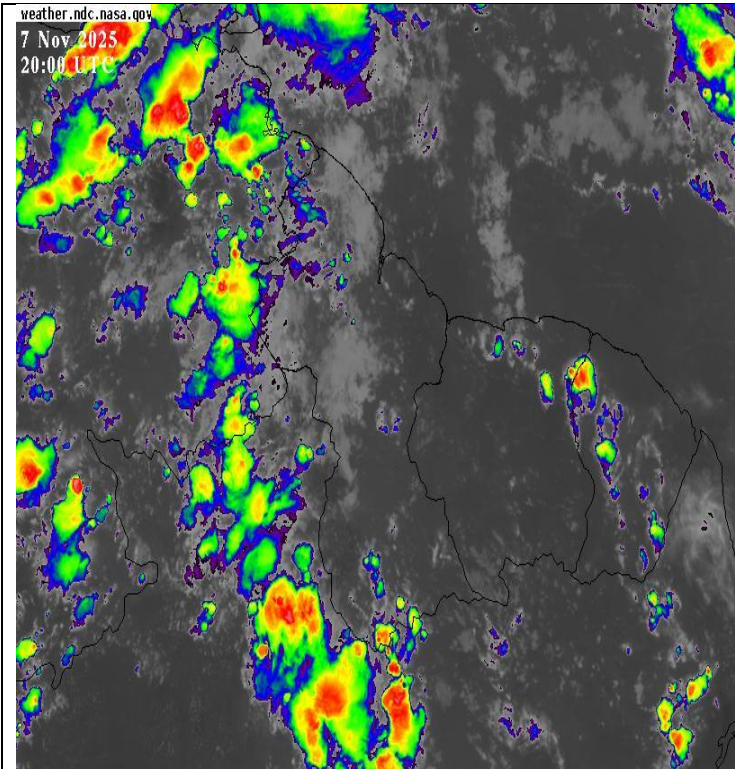

Synopsis: Surface confluence with low-level induced trough, enhanced by ITCZ, produced widespread instabilities in the morning hours, as the system moved westward, instabilities moved more over regions 1 and 7, as ridging and dry air mass replaced moist unstable air in other regions, generating stable conditions elsewhere in the afternoon. For the next 12 to 36 hours, mainly stable conditions are projected over the forecast area, after which similar atmospheric dynamics that produced widespread instabilities during the early morning are expected.

Today’s weather review: Mostly cloudy skies with light to moderate showers, rain, and thundershowers were observed in the morning hours; these conditions moved over regions 1 and 7 in the afternoon, as other regions became mostly fair.

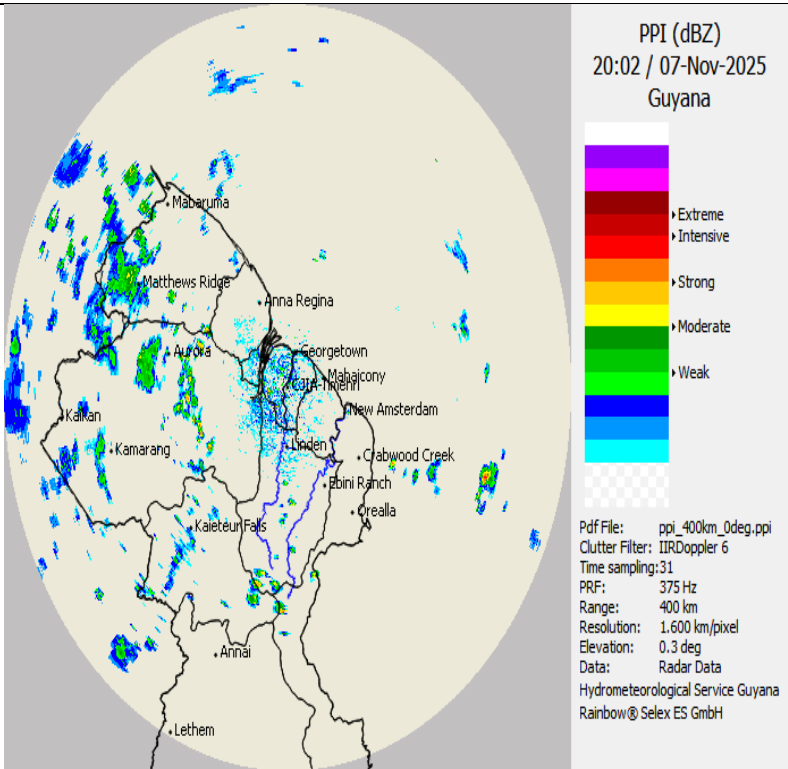

Table # 1 Weather forecast for the next twenty-four hours

Friday, 07 November 2025 (19:00 hrs – 07:00 hrs)			Saturday, 08 November 2025 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions	Mostly fair skies with a few passing showers are likely across Guyana.	Regions	Weather Conditions	Southern regions 6, 9, and coastal regions can expect mainly fair and sunny skies. Other regions can expect partly cloudy and sunny skies with isolated afternoon thundershowers and showers.
All regions.	 No significant rainfall.	Winds: Gentle to moderate easterly breeze. <u>Minimum temperatures:</u> Coast: 22 °C – 26°C Hinterland: 19 °C – 24 °C	Southern regions 6, 9 & coastal regions.	 No significant rainfall.	Winds: Gentle to moderate easterly breeze. Gusting before and during heavy downpours/thundershowers.
			Other regions.	 Rainfall between 0 & 10 mm.	<u>Maximum temperatures:</u> Coast: 30 °C – 34 °C Hinterland: 31 °C – 36 °C

The long-term daily average rainfall for Georgetown for the next 10 days, November 08 to 17, 2025, is 4.6 mm per day.

Infrared Satellite image valid at 20:00 UTC (16:00hrs) Friday, 07 November 2025.

Radar image valid at 20:02 UTC (16:02hrs) Friday, 07 November 2025.

Our Mission: To Observe, archive and understand Guyana’s weather, and Climate and provide meteorological, hydrological and oceanographic service in support of Guyana’s national needs and international obligation.
