HYDROMETEOROLOGICAL SERVICE MINISTRY OF AGRICULTURE

Weather Brief for Thursday, 23 October 2025 from the Hydrometeorological Service, Guyana Rainfall records for the past 24 hours, measured at 08:00hrs Thursday, 23 October 2025 were available for most of the stations. Richmond in Region 3 recorded the highest rainfall of 17.3 mm.

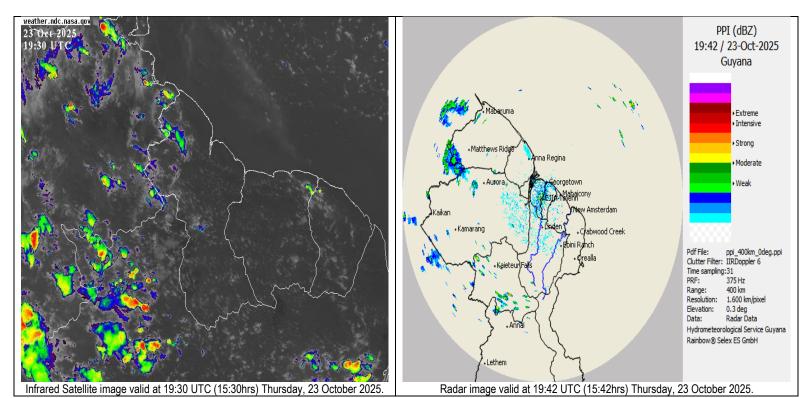

Marine Advisory: Strong Atlantic surface winds coupled with high-energy waves are likely to produce dangerous seas and damage to river and sea defences. Marine users and persons along coastal and riverine areas are advised to take the necessary precautions to safeguard life and property.

Synopsis: Dry air intrusion and ridging throughout most levels of the atmosphere, leading to mainly subsidence and stable conditions across the forecast area. However, trade wind moisture plumes and localized conditions produced some shortlived isolated instabilities. Similar atmospheric conditions are likely for the next 3 to 4 days.

Today's weather review: Inland parts of regions 1 to 3, 7, 8, and 10 observed partly cloudy and sunny skies with scattered weak to moderate showers. All remaining areas observed mainly fair and sunny skies.

Thursday, 23 October 2025 (19:00 hrs – 07:00 hrs)			Friday, 24 October 2025 (07:00 hrs – 19:00 hrs)		
Regions	Weather Conditions	Mainly fair skies are likely to prevail across Guyana.	Regions	Weather Conditions	Coastal and southern regions can expect mainly fair and sunny skies with a few passing showers. All
